

Design B Console Implementation Spec

Sep 26, 2026 · @Riyad Kalla

This spec tells an implementing session how to build Design B, the dark Console direction of the Bitcoin dashboard. Build to the two reference HTML files. Take every word from the locked wireframe and every rule from the signal strategy. This spec covers look, layout, states and behavior.

How to use this spec

Hand the implementing session this spec, the two reference files, and the two source documents. When they disagree, the order of authority is: wireframe words, then this spec, then the reference HTML.

File	What it is	Use it for
design-b-reference.html	The full dashboard, responsive, filled with the 26 Sep 2026 sample	The visual target at 1440, 1100 and 390 px wide. Its <code>:root</code> block holds every token.
design-b-settings.html	The Settings page, all fields blank	Form controls and the settings layout
7-friday-wireframe.md	The locked wireframe	Every sentence the page may show, and when each region collapses
2-signal-strategy.md	The signal rules	How postures, fires, floors and records are computed. The UI never computes a signal.

In scope: the dashboard page, Settings, the marker detail, every posture state, loading and error states, responsive layout, accessibility, and chart rendering.

Out of scope: the signal engine, the data pipeline, notifications, trading, and tax calculation. The UI receives a finished view model (Data contract, below) and renders it.

Design principles

1. **Action first.** The cash call and the coins call are the largest things on the page, in that order.

2. **One confidence line.** Each posture shows its record as text in one box. No meters, gauges, badges or progress bars for confidence, ever.
3. **Colour means direction, never strength.** Blue is into Bitcoin, amber is pause, sell or caution, white is neutral. A bigger action never gets a brighter colour or a larger badge.
4. **Two clocks are always visible.** The official call comes from the last Friday close. The Now panel shows the latest print. A later print never changes the official call.
5. **Calm density.** No motion on load, no ticking numbers, no flashing. The page is read once a week.

Changes from the canvas mockup

The reference files differ from the B artboard on the canvas in six ways. Build the reference, not the artboard.

1. **Caveats moved up.** Region 4 now sits directly under Cash, Coins and Now, as the wireframe orders it. On the artboard it came after the chart.
2. **Five and ten years is full width,** with the statement on the left and the tiles on the right.
3. **The chart is taller** (1000×500 instead of 1000×380) so it fills the row beside Context without a dead gap.
4. **Marker detail shows only type, date and finished-year result,** as the wireframe's marker page allows. The entry price is gone.
5. **The Lump-in bar colour is #4A7DB3.** The old #3F6A99 failed the 3:1 contrast floor for graphics against its track.
6. **Added:** the Settings page, the phone layout, the phone chart, loading and error states, and a screen-reader table of fires.

Colour tokens

Dark theme only; there is no light theme in this direction. Define these as CSS custom properties exactly as named; the reference file's `:root` block is the source. Contrast is WCAG 2.x against the surface named.

Token	Value	Used for	Contrast
--bg	#0C0F14	Page background, popover fill	—

Token	Value	Used for	Contrast
--surface-1	#131820	Panels	—
--surface-2	#0F141B	Wells inside panels: record box, stat tiles, cycle cards, inputs	—
--surface-3	#1A2029	Chips, inactive rail segments, switch track	—
--border	#222A35	Panel and well borders, row dividers, bar tracks	—
--border-strong	#2A3240	Header chips, buttons, inputs	—
--border-accent	#3A6E9E	Official-call tag, Progress card	3.31:1 on surface-1
--grid	#1E2530	Chart gridlines	Decorative
--axis	#2E3845	Chart baseline, popover border	Decorative
--band	#161D27	Chart fill between -20% and +55%	Decorative
--w200	#5F6A7A	200-week average line	3.25:1 on surface-1
--text-1	#E6EAF0	Primary text, price line, Hold segment fill	14.75:1 on surface-1
--text-2	#9BA6B5	Secondary text, notes	7.22:1 on surface-1; 6.64:1 on surface-3
--text-3	#7F8A9A	Labels, ticks, inactive rail text, trend line	5.09:1 on surface-1; 4.68:1 on surface-3
--text-4	#C9D1DC	Lead text inside the Progress card	12.00:1 on surface-2
--buy	#6CB4FF	Buy postures, -20% line, buy markers, focus ring, primary button	8.15:1 on surface-1
--buy-hover	#9CCBFF	Link and primary-button hover	—
--on-buy	#07131F	Text on a buy or sell fill	8.57:1 on buy

Token	Value	Used for	Contrast
--buy-soft	#C4DFFF	Build bars in cycle capture	10.58:1 on track
--buy-deep	#4A7DB3	Lump-in bars in cycle capture	3.36:1 on track
--sell	#F2A65A	Stand down, Trim, Exit, sell markers, +55% line, caution icons	8.80:1 on surface-1
--sell-tint	#1E1A14	Region 3 banner background	—
--danger	#FF8A7A	Form validation errors only	7.78:1 on surface-1

Rules:

- **Direction colours:** into Bitcoin uses --buy ; pause, sell and caution use --sell ; neutral uses --text-1 . Never use red or green.
- **Things that must be told apart also differ in shape or lightness.** Buy markers are circles and sell markers are diamonds. The three cycle-capture bars step in lightness (0.72, 0.43 and 0.19 relative luminance).
- **No gradients, glows or shadows.** Depth comes from the three surface steps and 1 px borders.

Typography, spacing and shape

Two families: **Geist** for words and **Geist Mono** for numbers, labels and the record box.

Fallbacks: 'Helvetica Neue', Arial, sans-serif and ui-monospace, 'SF Mono', Menlo, Consolas, monospace . Every aligned number uses font-variant-numeric: tabular-nums .

Role	Family	Size / line height	Weight	Tracking	Phone size
Cash posture word	Geist	104 / 0.95	700	-0.04em	64 (88 at 768-1023)
Coins posture word	Geist	60 / 1	700	-0.035em	48
Spot price	Geist Mono	52 / 1	500	-0.03em	40
Action line	Geist	25 / 1.3	500	-0.01em	21
Long-view statement	Geist	24 / 1.3	500	-0.01em	20

Role	Family	Size / line height	Weight	Tracking	Phone size
Stat value	Geist Mono	22 / 1.2	600	0	18
Section title	Geist	20 / 1.3	600	-0.01em	18
Card title	Geist	18 / 1.3	600	0	18
Brand name	Geist	17	600	-0.01em	17
Body large	Geist	16 / 1.45	400	0	16
Body	Geist	15 / 1.5	400, 500 values, 600 titles	0	15
Body small	Geist	13.5 / 1.5	400	0	13.5
Record box	Geist Mono	13 / 1.45	400, first row 600	0	12.5
Caption	Geist	12.5 / 1.5	400	0	12.5
Section label	Geist Mono, uppercase	11 / 1.3	400	0.12em	11
Chart text	Geist Mono	12.5	400, 600 for spot and open fire	0	11

Spacing. Page padding is 28 px top and bottom, 32 px sides; sides drop to 24 px below 1280 and both drop to 16 px below 768. The grid gap is 16 px at every size. Panel padding is 24 px, except Cash (28), Chart and Context (20), and the spectrum strip (16 by 20); all panels use 20 px on phones. Stacked text inside a panel sits 10–14 px apart; the Cash panel puts 26 px between the action block, the window and the record box.

Shape.

Element	Radius	Height
Panel	16	Content
Cycle card	12	Content
Well: record box, stat tile, long-view tile, input, button	10	Inputs and buttons 44
Rail segment, header clock chip	8	38 (36 phone), 32
Chip, tag	999	30, tag 26
Window bar	4	8

Element	Radius	Height
Capture bar	3	6

Borders are 1 px. The focus ring is a 2 px `--buy` outline at 2 px offset on every interactive element. There are no shadows.

Layout, grid and breakpoints

A 12-column grid with 16 px gaps, centred, at most 1440 px wide including padding. At 1440 px the content is 1376 px wide.

Row	Contents	Columns
1	Top bar	Full width
2	Spectrum strip	12
3	Region 1 Cash, then Region 2 Coins stacked above Now	7 and 5
4	Region 3 Disagreement banner, only when rendered	12
5	Region 4 Caveats, three columns	12
6	Region 5 Price chart, then Region 6 Context	8 and 4
7	Region 7 Five and ten years: statement (5 parts), tiles (7 parts)	12
8	Region 8 Cycle capture, four cards	12
9	Region 9 Footer	Full width

Rows 3 and 6 stretch both columns to the same height. In row 3 the Now panel grows to fill; in row 6 the chart grows to fill (see Price chart).

Width	What changes
1280 px and up	The layout above.

Width	What changes
1024–1279 px	Chart and Context each span 12. Context readings flow in two columns. The header hides the UTC chip and the Opened text.
768–1023 px	Cash spans 12; Coins and Now sit side by side under it. Caveats stack in one column. Five and ten years stacks. Cycle cards go 2 by 2. Header clock chips hide and a one-line clock sentence appears under the header. Cash word drops to 88 px.
Under 768 px	One column in this order: header, clock line, Cash, Coins, Now, spectrum strip, Disagreement if rendered, Caveats, chart, Context, Five and ten years, Cycle capture, footer. The cash rail wraps to 3 by 2. The chart switches to its narrow geometry. Cycle cards stack. The brand subtitle hides.

The clock sentence on narrow screens reads: "Official call: Fri 25 Sep 2026 close · Next close Fri 2 Oct · Friday close is 00:00 UTC Saturday · Opened 26 Sep 2026."

No horizontal scrolling at any width down to 320 px, and none at 200% zoom.

Components, region by region

Class names below match the reference file. Every sentence comes from the view model; nothing is hard-coded except labels.

Top bar

- **Left:** 24 px brand mark, "Bitcoin dashboard", an 18 px divider, "Read-only · one holder".
- **Right:** clock chips "Official call · Fri 25 Sep 2026 close" (lock icon), "Next close · Fri 2 Oct 2026", "00:00 UTC Sat" (mono), then "Opened 26 Sep 2026", then a 44 px Settings icon button (`aria-label="Settings"`) linking to the Settings page.

Spectrum strip

A Design B addition, not in the wireframe. It shows where this week sits, never how sure the call is.

- **Two rails:** "02 · Coins held" (Exit, Trim, Hold) at 340 px wide, then a divider, then "01 · Cash" (Stand down, Stay the course, Slow in, Build, Lump in, All in) filling the rest.
- **Order** runs from out of Bitcoin to into Bitcoin, by how much new money moves this week.
- **Axis line** under the rails: "← Out of Bitcoin", "Position on the spectrum only. Not a confidence scale.", "Into Bitcoin →". The middle sentence hides on phones.
- **One active segment per rail;** the cash rail has none during Exit or when the call is missing. Active fill follows tone: buy is `--buy` with `--on-buy` text, neutral is `--text-1` with `--bg` text, sell is `--sell` with `--on-buy` text. Inactive is `--surface-3` with `--text-3`.
- **Segments are equal width and never interactive.** Mark up each rail as an `<ol>` with `aria-current="step"` on the active item.

Region 1, Cash

- **Head:** label "01 · Cash" and a pill tag "Official call" (`--border-accent` border, `--buy` text).
- **Posture word** as an `h2`, coloured by tone.
- **Action line** is the first action sentence (25 px). The remaining sentences follow in one 15 px `--text-2` paragraph.
- **All-in window**, shown only while an All-in window is open: a label, "N days left" in mono `--buy`, and three equal 8 px bars. Fired and current bars are filled; the last-grace bar is a 1 px outline. Captions read "Fri 18 Sep · fired", "Fri 25 Sep · grace, this call", "Fri 2 Oct · last grace". N is whole days from now to the last grace close (00:00 UTC Saturday), rounded down; under one day it reads "Closes today".
- **Record box:** a `<dl>` in a well with an 84 px key column. Rows come from the view model with keys RECORD, PAYOFF, MISSES and STATUS; RECORD is weight 600. The words "High confidence" appear in the RECORD row only when the floor is 80% or more. There is never a badge.

Region 2, Coins

- Label "02 · Coins", a 60 px posture word (Hold neutral; Trim and Exit sell tone), its sentence, then chips for off states: "Trim off · ceiling not set", "Exit off · thesis not declared".
- When Trim or Exit is on, add the tax line "A sale can create a tax bill. Rate not computed." Exit also shows its declaration date and "No floor."

Now

- **Head:** label "Now · 25 Sep 2026 daily close", with the chip "Same print as the official call" or "Later print · not the official close".
- **Spot** in 52 px mono, then two stat wells: "Gap against the Friday trend" (−41%) and "Trend" (≈ \$141,000).
- **Note** pinned to the bottom: "A later print can move these levels. It does not change the call. Developing: none." When a later print would arm or fire, the last sentence becomes "Developing: [condition]. Not an official fire."

Region 3, Disagreement

Rendered only when All in and Stand down are both on; otherwise not in the DOM. It is a full-width banner with `--sell-tint` fill, a 1 px `--sell` border, 16 px radius, an amber alert icon and 15 px text: "Sell roll is also in its pause. All in still wins. The week is not cut in half."

Region 4, Caveats

Label "04 · Caveats", then up to five items in three columns (one column under 1024 px). Each item has a 20 px icon, a 15 px bold title and a 13.5 px `--text-2` body. Icons by kind: gold is the amber alert triangle, fire week is trend-up, fit is two curves, same week is layers, armed wait is a clock. The whole region is not rendered when no caveat applies.

Region 6, Context

Label "06 · Context", the note "Official Friday readings", then the intro caption. There are five readings in fixed order: Buy cross, Z-score, Thermometer, Realized price, Sell roll. Each has a mono label, a right-aligned mono flag, a 15 px value and a 12.5 px note. Flag colours: FIRED and ARMED use `--buy`, GOLD FLAG uses `--sell`, QUIET uses `--text-2`, numeric flags use `--text-1`. A quiet sell roll still prints "Quiet."

Region 7, Five and ten years

Left: label, the 24 px statement, the 13.5 px caveat. Right: a two-column tile grid with Ceiling and Thesis broken side by side, then Monitors and Regime from 2024 at full width. Tiles are wells with a mono label and 14 px text.

Region 8, Cycle capture

- **Head:** label, the title "Share of each cycle's gain, buying the signal and holding to the high", and the note on the right (460 px max): "This page does not sell there. A higher share is an earlier price. It is not a higher probability. Sell roll is not in this table. It does not sell coins." That note must always sit next to the bars.
- **Key** with three swatches: Buy cross `--buy` , Build `--buy-soft` , Lump in `--buy-deep` .
- **Cards:** one per finished cycle the buy cross traded, then a Progress card with a `--border-accent` border, a `--buy` title and a lead sentence. Each row has name, share (mono), a 6 px bar whose width equals the share (at least 2 px when above zero), and a mono 11 px detail line. The footnote reads "2011 and 2013 had no buy-cross fire. They are not scored."

Region 9, Footer

Two 12.5 px `--text-3` captions: "Research rule. A large position needs the holder's full balance sheet." and "This page does not trade and does not compute tax."

Marker detail

- **Desktop:** a popover anchored under the marker by a 0.8 px `--buy` connector. The card is `--bg` with an `--axis` border and 6 px radius. The title is "Buy cross · 17 Mar 2023" (bold); the second line is "Finished year: +138%" or "Open. Not in the completed count." Sell-roll titles use the month: "Sell roll · Jun 2013".
- **Behaviour:** one popover at a time. Esc, a click outside, or a second click closes it, and focus returns to the marker. It flips above or left near an edge. Opening it never changes the call.
- **Phone:** markers are display-only. A "Show fires" text button under the chart opens a bottom sheet listing every fire with the same two lines (proposed; see System states).

Price chart

Hand-built SVG, computed at its rendered pixel size. Do not scale one fixed drawing: text must stay at its specified pixel size. The reference file's paths are sample geometry only. Production draws from the view model's series, and never fits the trend itself.

Size. Width is the panel's content width. Height is $0.5 \times \text{width}$ at 1280 px and up, grown to fill the row beside Context if that is taller. Use $0.45 \times \text{width}$ at 1024–1279, $0.55 \times \text{width}$ at 768–1023, and $0.667 \times \text{width}$ under 768. Recompute on resize with a ResizeObserver.

Plot margins (px). Left 56, right 92, top 16, bottom 32. Under 768: left 40, right 58, top 10, bottom 24. The right margin holds the end labels.

Scales.

- **x:** linear UTC time, from 1 Jan 2013 to 31 Dec of the latest print's year. Ticks on 1 January every 2 years (every 4 under 768).
- **y:** log10, from $0.6 \times$ the lowest close shown to $1.8 \times$ the highest +55% band value. Ticks at each power of ten, labelled \$10, \$100, \$1k, \$10k, \$100k, \$1M. Under 768, label every other decade.
- **Why 2013:** the first sell-roll fire is June 2013 and the first buy cross July 2015.

Layers, bottom to top.

#	Layer	Style
1	Gridlines at y ticks	<code>--grid</code> , 0.8 px
2	Band between the -20% and +55% lines	<code>--band</code> fill, no stroke
3	-20% line (trend × 0.80)	<code>--buy</code> , 1.1 px, dash 1.5 2.5
4	+55% line (trend × 1.55)	<code>--sell</code> , 1.1 px, dash 1.5 2.5
5	Trend (latest official fit, drawn across history)	<code>--text-3</code> , 1.2 px
6	200-week average	<code>--w200</code> , 1 px, dash 5 3
7	Price, every Friday close plus later dated prints	<code>--text-1</code> , 1.4 px, round joins
8	Baseline	<code>--axis</code> , 1 px
9	Sell-roll markers	Diamond, half-diagonal 5 px (4 phone), <code>--sell</code> fill, 1.2 px <code>--surface-1</code> stroke
10	Buy-cross markers	Circle r 5 (4 phone), <code>--buy</code> fill, same stroke
11	Open fire ring	Circle r 10 (8 phone), <code>--buy</code> 1.4 px, no fill
12	Selected ring	Circle r 9, <code>--text-1</code> 1.2 px
13	Labels, then the popover	See below

End labels sit at x = plot right + 8 px, each at its series' last y value: "+55%" in `--sell` , "Trend \$141k" in `--text-2` , "-20%" in `--buy` , and the spot ("84,413") bold in `--text-1` . Resolve collisions by sorting on y and pushing each label down to at least 1.2 × font size below the one above. When the spot label moves more than 4 px, join it to the last point with a 0.7 px leader. Under 768, drop the Trend label.

Open-fire label. "18 Sep 2026 · open" in bold `--buy` , right-aligned 2 px inside the plot. Place it under the open marker at the first y, stepping down 4 px at a time, where its box clears the price and 200-week lines. If there is no room below, put it above.

Markers are focusable (`tabindex="0"` , `role="button"`) with an invisible 11 px-radius hit circle. Each has an `aria-label` such as "Buy cross, 17 March 2023. Finished year +138%." Enter or Space opens the marker detail. Tab order runs in date order. There is no hover crosshair.

Text is Geist Mono 12.5 px (11 px under 768), ticks in `--text-3` .

Legend is HTML above the SVG: Price, Trend, +55%, -20%, 200-week average, Buy cross, Sell roll, each with a 20 px line swatch or 11 px shape.

Caption row under the chart: "Spot \$84,413. The 200-week average is a map line. It does not time a buy. July 2020 fired nearer the trend." and "Selected marker: detail only. The call does not change."

Accessibility. The SVG has `role="img"` and a `<title>` . A visually hidden table lists every fire with its date and finished-year result.

The chart does not draw a power-law floor band (it is not defined), a gap bracket, volume, or any signal the wireframe excludes.

Posture states

Only the rails, Region 1, Region 2, Region 3 and Region 4 change with the posture. The chart, Context, Five and ten years and Cycle capture stay in place and refresh their numbers. The words below are the wireframe's; the engine supplies the dates and figures.

Posture	Rails (cash, coins)	Word and tone	Region 1 sentences	Record rows	Region 3 or 4 adds
All in (the sample)	All in, Hold	"All in", buy	"Buy now, or by the Friday 2 Oct 2026 close. Up to \$100,000." "After that close, the call is whatever that Friday says." "Standing contribution continues." Plus the window.	RECORD "4 of 4. Floor about 60% (Wilson 90%). 4 episodes." PAYOFF "Beat a 52-week spread, 4 of 4, +18% to +92% coins." STATUS "This fire is open. Not high confidence."	Caveats: gold flag, fit range

Posture	Rails (cash, coins)	Word and tone	Region 1 sentences	Record rows	Region 3 or 4 adds
All in, under cost	All in, Hold	"All in", buy	As above, plus "The build slice also runs."	All-in rows only. Build's record stays in the realized-price reading.	Caveat: "This week is not a higher probability."
All in during a stand-down pause	All in, Hold	"All in", buy	As All in	All-in rows	Region 3 rendered
Build	Build, Hold	"Build", buy	"One tranche, sliced this Friday, while under cost." "A stand-down pause ends. Standing contribution resumes."	RECORD "79% of 91 weeks. 4 spells." STATUS "Schedule untested."	—
Build while armed	Build, Hold	"Build", buy	As Build, plus "Cash waiting on the cross stays put."	Build rows, plus STATUS "Armed wait untested."	Caveat: "Extra cash waits for the z-score to cross above zero."
Stand down	Stand down, Hold	"Stand down", sell	"Pause new money for up to 12 months, or until All in or Build." "At 12 months the cash follows the gap switch."	RECORD "7 of 8. Floor about 59%. About six episodes." MISSES "June 2013 lost. Missed 2019–20 and 2025–26." STATUS "12-month pause untested."	—
Lump in	Lump in, Hold	"Lump in", buy	"Cash available goes in on the Friday it is available." "Standing contribution continues."	RECORD "6 of 6 finished regimes. Floor 69%." STATUS "One regime open since November 2025."	—

Posture	Rails (cash, coins)	Word and tone	Region 1 sentences	Record rows	Region 3 or 4 adds
Slow in	Slow in, Hold	"Slow in", buy	"A new lump sum spreads over 12 months." "Standing contribution continues."	RECORD "2 of 3 regimes. Floor 25%." STATUS "Weakest record on the page."	—
Stay the course	Stay the course, Hold	"Stay the course", neutral	"Standing contribution only."	RECORD "No event record." STATUS "Between the gap lines, a new lump sum has no measured edge."	—
Stay the course while armed	Stay the course, Hold	"Stay the course", neutral	"Standing contribution continues. Extra cash waits."	RECORD "No event record." STATUS "Armed wait untested."	Caveat: "Waiting for the cross. The cross has not fired."
Trim, with any cash posture	Cash unchanged, Trim	Coins word "Trim", sell	Region 1 unchanged. Region 2: "Sell from the ceiling down to the target, highest-cost lots first." "A sale can create a tax bill. Rate not computed."	Cash rows unchanged	When a stand-down pause is also on, Region 2 adds "Sped up: finish by the end of the pause."
Exit	None, Exit	Cash word "No new buy", neutral; coins word "Exit", sell	Region 1: "No new buy." Region 2: "Sell all." plus the declaration date and "No floor."	RECORD "No floor."	The monitors stay in Region 7. They do not fire Exit.

Rules that hold in every state:

- **One cash posture always.** All in together with Build is still led by All in. Build never lends its record to All in, and All in never lends its 4 of 4 to Build.
- **Trim stays off** until Settings has coins held, investable net worth, a target and a ceiling.
Exit stays off until Settings has a dated "Thesis broken" declaration.

- **A blank amount** removes the dollar clause and names the pile instead. For example, "Up to \$100,000." becomes "Use your cash available to invest." (proposed wording). The page never invents \$100,000.
- **After the last grace Friday closes**, the window disappears and Region 1 shows whatever that Friday's close says. At today's gap that would be Lump in.

Data contract and formatting

The engine produces one view model per official Friday close and refreshes the Now and chart fields on every new print. The UI renders it as given: it formats nothing that carries meaning, and it computes only scales and layout. Sentences arrive already worded.

```
type Tone = 'buy' | 'neutral' | 'sell';
type CashPosture = 'STAND_DOWN' | 'STAY' | 'SLOW_IN' | 'BUILD' | 'LUMP_IN' |
'ALL_IN' | 'NO_NEW_BUY' | 'NO_CALL';
type CoinPosture = 'HOLD' | 'TRIM' | 'EXIT';
type ISODate = string; // 'YYYY-MM-DD', UTC

interface DashboardVM {
  openedAt: string; // ISO datetime; shown in the
holder's local date
  official: {
    closeDate: ISODate; // the Friday whose 00:00 UTC
Saturday close set the call

```

Formatting rules the engine follows, and the UI uses only for axis ticks and the countdown:

Kind	Rule	Example
Money	en-US, whole dollars, thousands separators	\$84,413
Money on the chart	Compact, lower-case k or M	\$141k, \$1M
Signed percent	True minus sign U+2212, plus sign for gains	–41%, +138%
Percent precision	Whole numbers unless the source has one decimal	24.5%
Dates in labels	Short weekday, day, short month, year	Fri 25 Sep 2026
Dates in sentences	Day, short month, year	18 Sep 2026
Month-only dates	Short month, year	Jun 2013
Year ranges	En dash, two-digit end year	2019–20

Kind	Rule	Example
Approximate values	"about" in sentences, $\approx$ in stat tiles	about \$53,000; $\approx$ \$141,000
Official clock	Always UTC; the Friday close is 00:00 UTC Saturday	—
Opened date	The holder's local date	Opened 26 Sep 2026

System states (proposed additions)

The locked wireframe does not cover loading, stale data or failures, but an implementation needs them. The wording below is proposed; confirm it before build. None of these states may show a posture the engine did not produce.

State	Trigger	What the page shows
Loading	Before the first view model arrives	The header, plus panels whose text lines are <code>--surface-3</code> bars at their line heights. No numbers and no posture words. <code>aria-busy="true"</code> on the main region. No shimmer animation.
Stale print	The latest print is more than 26 hours old	The Now chip reads "Stale print" in <code>--sell</code> , and the note becomes "The latest print is from [date]. Levels may be out of date." The official call is untouched.
Missing Friday close	The engine cannot compute the official close	Cash word "No call" (neutral). Sentence: "The Friday [date] close is missing. There is no official call until it arrives." No record box, no active cash segment. Coins and Context show the previous Friday, with "(from Fri [date])" after each Context value.
No data at all	The view model fails to load	One centred panel: "The dashboard could not load its data. Nothing here is a call." and a "Try again" button.

State	Trigger	What the page shows
Fires on a phone	Under 768 px	A "Show fires" text button under the chart opens a bottom sheet titled "Fires", listing each fire with its two marker-detail lines, newest first, with a 44 px Close button.

No state uses toasts or red.

Settings page

A separate route, a single 760 px column, built from the same tokens. The reference is [design-b-settings.html](#). Every field starts blank. These are the page's only inputs.

Card	Fields	Rules and help text
Standing contribution	Amount (\$); Every (Week or Month segmented control)	Hint: "Shape, if you have not chosen: about \$5,000."
Build tranche	Amount (\$)	Hint: "Shape, if you have not chosen: about \$100,000, sliced on cheap Fridays."
Cash available to invest	Amount (\$)	Help: "Used by All in, Lump in, and Slow in. This amount is not refilled in order to wait for the next cross." Hint: "Shape, if you have not chosen: up to \$100,000 on an All-in fire."
Trim	Coins held (BTC, up to 8 decimals); Investable net worth (\$); Target share (%); Ceiling share (%)	Help: "Any blank means Trim stays off." The ceiling must be above the target.
Thesis	"Thesis broken" switch (off shows "Not declared"); Date, enabled only when the switch is on	Help: "Not declared means Exit stays off. This is a holder record, not a signal override." Turning the switch on requires a date before saving.

Card	Fields	Rules and help text
Account	Taxable, IRA or Fund (radio group, none selected)	Help: "Blank means the page does not compute tax. After-tax dollars are not a score until this is set."

Controls.

- **Inputs** are 44 px high on `--surface-2` with a `--border-strong` border and 10 px radius. On focus the border turns `--buy` with a 1 px `--buy` ring. Values are Geist Mono 15 px with tabular figures; the placeholder is "Not set" in `--text-3`. Units (\$, BTC, %) sit inside the field as mono affixes.
- **The segmented control** is a radio group: 36 px segments; the selected one is `--text-1` fill with `--bg` text.
- **The switch** is 52 by 30 with `role="switch"`: off is `--surface-3`, on is `--sell`. On is amber because declaring a broken thesis moves toward Exit.
- **Radio cards** are 44 px outlined; the selected one gets a `--buy` border and dot.

Validation happens on blur and on save; errors show under the field in `--danger` at 12.5 px. Amounts must be 0 or more. Shares must be between 0 and 100, and the ceiling above the target. Coins held allows 8 decimals. A partly filled Trim card saves, but Trim stays off, and the card says which field is blank.

Actions: "Save settings" (`--buy` fill, `--on-buy` text) and "Cancel" (outline), right-aligned, full width and stacked on phones. The top bar has "Back to dashboard". After a save, return to the dashboard; the next view model reflects the new amounts.

Where settings are stored (on this device or on a server) is an open question.

Accessibility

Target WCAG 2.2 AA.

- **Contrast:** every text pair in the token table is 4.5:1 or better, and every meaningful graphic is 3:1 or better. Do not add new colour pairs without checking them.
- **Colour is never the only signal.** Rails carry words, markers differ in shape, flags carry words, and the record says "Not high confidence" in text.
- **Headings:** the brand name is the page's `h1`; posture words are `h2`; section labels are real labels tied to their regions with `aria-labelledby`.

- **Landmarks:** `header` , `main` , and `footer` . The chart is a `figure` with a `figcaption` , and Context is an `aside` .
- **Keyboard order:** Settings button, then the chart markers in date order, then any open popover. Nothing else on the dashboard is interactive. The popover closes on Esc and returns focus.
- **Focus ring:** 2 px `--buy` at 2 px offset on every interactive element, never removed.
- **Touch targets** are 44 px or larger: the Settings button, Show fires, form controls and buttons. Chart markers on desktop use a 22 px hit circle; on phones they are display-only.
- **Screen readers:** the chart has a `<title>` summary plus a hidden table of fires; rails use `aria-current="step"` ; the window uses an `<ol>` with `aria-current` on this call; decorative icons get `aria-hidden="true"` .
- **Zoom and reflow:** usable at 200% zoom and at 320 px wide with no horizontal scroll.
- **Motion:** none on load. The switch knob's 120 ms slide and the popover's 120 ms fade stop under `prefers-reduced-motion` .

Icons, fonts and build notes

Assets. There are no raster images, logos or icon fonts. Every icon is an inline 24×24 stroke SVG, drawn at 14–24 px, with `stroke-width` 1.8–2, round caps and `currentColor` unless noted.

```

```

Fonts. By default, load Geist 400, 500, 600 and 700 and Geist Mono 400, 500 and 600 from Google Fonts with `display=swap`, exactly as the reference files do. If third-party font hosts are not allowed, self-host the same families from the official Geist release.

Suggested stack. TypeScript, any component framework (React is the natural fit for the view-model shape), and plain CSS with the custom properties above. Draw the chart by hand with `d3-scale` (`scaleUtc`, `scaleLog`) and `d3-shape` (`line`), or with plain math; do not use a charting library, because none will match the layers, labels and collision rules. Format with `Intl.NumberFormat('en-US')` and the U+2212 minus.

Do not:

- add meters, gauges, progress rings, badges or any second confidence display;
- scale colour, size or weight with how big the action is;
- animate numbers, pulse the posture, or add live tickers;
- compute postures, fires, floors or records in the UI;
- add signals the wireframe excludes: Fear & Greed, reserve risk, VDD, Puell, netflow, funding, the Galaxy checklist, Stage Two, the six-rung ladder, NUPL or the MVRV z-score;
- add broker connections, order buttons, tax calculations or a control that picks a posture;
- use emoji, gradients, glows or drop shadows.

Acceptance checklist and open questions

The build is done when every box is ticked.

- ☐ Side-by-side screenshots match design-b-reference.html at 1440, 1100 and 390 px, and design-b-settings.html at 1440 and 390 px.
- ☐ No horizontal scroll at 320 px wide or at 200% zoom.
- ☐ Every sentence on the page comes from the view model or is a fixed label in this spec.
- ☐ A development-only page renders all twelve posture states from fixture view models, and each matches the Posture states table.

- ☐ Region 3 is absent from the DOM unless All in and Stand down are both on. Region 4 is absent when there are no caveats.
- ☐ A new print updates Now and the chart but never Region 1, the rails or the record box.
- ☐ "High confidence" appears only when `highConfidence` is true, and no other confidence display exists anywhere.
- ☐ The chart uses a log y scale with layers in the specified order, non-overlapping end labels, and an open-fire label that clears both lines, at all four breakpoints.
- ☐ Markers work from the keyboard; the popover closes on Esc and returns focus; phones get the Show fires sheet.
- ☐ An automated accessibility scan (axe) reports no violations on the dashboard or Settings.
- ☐ With blank settings, no dollar figure is invented, and Trim and Exit stay off until their inputs exist.
- ☐ Settings validation works as specified, and saving returns to the dashboard.
- ☐ Loading, stale, missing-close and no-data states render as specified.

Open questions to settle before or during the build:

1. **Phone order.** The wireframe says phones stack "in the same order, action first". This spec puts Cash, Coins and Now first and moves the spectrum strip after them. Confirm.
2. **The spectrum strip** is a Design B addition outside the locked wireframe. Keep it?
3. **Proposed wording** for the system states, the blank-amount sentence ("Use your cash available to invest.") and the Show fires sheet: accept or reword.
4. **Exit display:** no active cash segment and the cash word "No new buy". Confirm.
5. **Where settings live:** on this device only, or on a server. This decides whether coin holdings and net worth ever leave the device.
6. **Posture-change alert:** still phase 2?
